

## INSTRUCTIONS FOR AUTHORS

These guidelines are in accordance with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals (known as the Vancouver style), determined by the International Committee of Medical Journal Editors

The Israel Medical Association Journal (IMAJ) will accept for consideration original manuscripts that have not or will not be submitted or published elsewhere before appearing in IMAJ. This restriction does not apply to abstracts or proceedings of scientific meetings. If any part of the article (e.g., a table) has been published previously, the author must obtain permission from the publisher (or journal) and acknowledge such in full. The Editor also welcomes Book Reviews and Letters.

### PEER REVIEW

Articles will be sent for peer review to at least two experts at the editor's discretion.

Authors may recommend reviewers in their field, in Israel or abroad, but the Journal is not obligated to consult the reviewers suggested.

### STUDY PROTOCOLS

Human and animal studies submitted to the Journal are required to have received formal approval by the author's Institutional Review Board, and clinical studies must adhere to the principles of the Declaration of Helsinki.

### SUBMISSION OF MANUSCRIPTS

IMAJ requires that the manuscript be sent only through the IMAJ website in one word file that includes Title Page, Abstract (for Original) Introduction (for Review & Case report), References, Tables and Figures. We also require the completed checklist and a covering letter. Also a processing fee of NIS 100 or \$25 payable to IMAJ through the IMAJ through the IMAJ website by credit card: [www.ima.org.il/imagj](http://www.ima.org.il/imagj).

In articles with more than six authors, state the role of each author in the study.

Title Page: Concise and descriptive (not declarative) title, authors' first and family names with academic degree,

institutional affiliation (departments and hospitals) and corresponding author's name, address, telephone and fax numbers, and email address. We also require the corresponding author's cellular phone number (this number is for our purposes only and will not be printed).

**Original articles** should not exceed 8 pages of text, 20 references and 4 tables and/or figures, in the following format: Title page, Abstract, Introduction, Methods, Results, Discussion, References, Tables and Figures.

**Abstract** (Original Articles only): Structured abstract of up to 250 words with the following headings: Background, Objectives, Methods, Results, Conclusions.

No more than five key words should appear above the abstract.

**Reviews** should not exceed 10 pages of text, 30 references and 4 tables and/or figures. Three short "take home messages" are required.

**Case Communication** should not exceed 5 pages, 5 references, and 1 table or figure.

**Letters to the Editor** should not exceed 2 pages and 4 references.

**References** should be within square brackets and numbered consecutively in the text. References that are cited first in a table or figure should be numbered according to their sequence in the text (i.e., the reference number in the table should follow the numbering in the text). Personal communications or unpublished data should appear with appropriate acknowledgment in parentheses in the text only. The style for the Reference list is that of Index Medicus. If the number of authors is 6 or fewer all should be given; if there are 7 or more, give the first 3, et al. If the citation is a Review, Editorial, Letter, or Abstract, indicate such in square brackets after the title. For a book or a chapter in a book, list the authors of

the chapter, chapter title, book editors, book title (first letter of each word capitalized), city, and publisher, in that order. See below:

1. Xu C, Poirier BL, Van Huyen JP, et al. Modulation of endothelial cell function by normal polyspecific human intravenous immunoglobulins: a possible mechanism of action in vascular diseases. *Am J Pathol* 1998; 45: 1285-300.
2. Beutler E, Grabowski GA. Gaucher disease. In: Scriver CR, Beaudet AC, Sly WS, Valle D, eds. *The Metabolic and Molecular Basis of Inherited Disease*. Vol. 2, 7th edn. New York: McGraw-Hill, 1995: 2641-70.

**Acknowledgments** may appear at the end of the text. Pages should be numbered.

**Illustrations:** Graphs and photographs must be included in the manuscript file, with clear annotations. Figure legends should appear on a separate page in the text.

**Abbreviations:** Use only standard abbreviations if the term appears frequently. All terms must be defined.

**Drug Names:** Generic names are preferred; if trade names are used, give the company name and country in parentheses.

**Conflict of interest:** Authors should indicate in the accompanying covering letter all potential conflicts of interest, including any commercial association with the company whose product is the subject of research or with a company that manufactures comparable products. After the article has been accepted for publication the information will appear as an acknowledgment.

**All authors should sign the Disclosure and Declaration forms.**

**For each article you submit, please complete and enclose the checklist form.**

## INSTRUCTIONS FOR THE USE OF ARTIFICIAL INTELLIGENCE

- \* At submission, the journal should require authors to disclose whether they used artificial intelligence (AI)-assisted technologies (such as Large Language Models [LLMs], chatbots, or image creators) in the production of submitted work. Authors who use such technology should describe, in both the cover letter and the submitted work, how they used it. Chatbots (such as ChatGPT) should not be listed as authors because they cannot be responsible for the accuracy, integrity, and originality of the work, and these responsibilities are required for authorship.
- \* At the point of submission, authors must declare if AI or AI-assisted technologies were used in the preparation of the manuscript. Authors should also provide this declaration in the cover letter.
- \* In a separate section in the manuscript (which could be the methods section), authors must clearly describe how AI or AI-assisted technologies were used in the study and/or preparation of the manuscript. The use of AI or AI-assisted technology could include the use of LLMs, chatbots (such as ChatGPT), and image creators.
- \* Artificial intelligence or AI-assisted technologies do not qualify as authors and must not be listed authors or co-authors on a manuscript. Similarly, they should not be listed as authors or co-authors in references.
- \* Authors must declare and confirm that no part of their submission, which includes any content arising from AI or AI-assisted technology, is under consideration or has been submitted to another journal and that no element of their submission, including any content arising from AI or AI-assisted technology, constitutes plagiarism or breaches the journal's ethical policies.
- \* Chatbots cannot be authors.
- \* Authors should be transparent when chatbots are used and provide information about how they were used.
- \* Authors are responsible for the work performed by a chatbot in their paper (including the accuracy of what is presented and the absence of plagiarism) and for acknowledging all sources (including material produced by the chatbot).
- \* Editors need appropriate tools to help them detect content generated or altered by AI, and these tools must be available regardless of their ability to pay.
- \* It is now clarified that all authors must have 'critically reviewed' the work for important intellectual content and must have the opportunity to make changes.
